1. Brand Strategy

USP (Define the main reason clients should choose GrowtivAI)

GrowtivAI builds practical AI and automation systems around a business's needs, sets them up, tests them and hands them over working. Clients get a working solution with a clear scope instead of being left to figure out tools themselves.

Positioning (Finalize AI Growth & Automation Partner)

GrowtivAI is an AI Growth & Automation Partner for Indian businesses. We help businesses improve customer enquiry handling, follow-ups and daily operations through practical AI systems, websites and automation.

Target Audience (Define ideal customer and priority industries)

Overall target audience: Indian businesses of all types that can benefit from AI, automation and better digital systems.

Priority industries may include:

- Real estate and property businesses.
- Coaching institutes and education businesses.
- Clinics and healthcare businesses.
- Salons, restaurants and hospitality businesses.
- E-commerce brands.
- Local service businesses.
- Other small and medium-sized businesses with clear operational problems.

Ideal customer: A business owner who faces repetitive manual work, missed enquiries, delayed responses, inconsistent follow-ups or inefficient processes, and is willing to invest in a practical solution.

Initial market-entry strategy: Start with owner-run real estate businesses in Bihar and Eastern India to validate the offer, acquire paying clients and build case studies. Coaching institutes are a potential next niche, especially before admission season.

Real estate is the starting niche, not the permanent target audience. The first 10 business conversations will help validate demand and refine the strategy.

Brand Promise (Decide the specific outcome you promise)

We build and set up practical systems that help businesses handle enquiries and follow-ups more reliably, with clear deliverables, defined timelines and a working solution they can see before making the final payment.

We promise clarity and implementation, not guaranteed sales growth or unsupported performance numbers.

Mission & Vision (Define current purpose and long-term direction)

Mission: Fix the problems that cost Indian business owners the most time or money by building working systems they can see, understand and measure.

Vision: Make AI and proper business systems accessible to everyday Indian businesses, starting in Bhagalpur and expanding across India.

Long-term goal: Build GrowtivAI into a trusted AI Growth & Automation Agency generating ₹1Cr+ in annual revenue, supported by real case studies, recurring clients and scalable delivery systems.

GrowtivAI visual rules:

Element	Current decision
Primary colour	#0B3215
Contrast colour	#FFFFFF
Heading font	Space Grotesk
Body and UI font	Inter
Visual direction	Modern technology
Brand personality	Innovative and trustworthy
Colour usage	Context-based, light and dark layouts

Layout	Spacious, structured and minimal
Imagery	Product demos + business photography + restrained graphics
Design philosophy	Quiet consistency

Typography rules

Fonts selected

Your font pairing is already established: Space Grotesk for headings and Inter for body/UI.

The rule is to create hierarchy through size, weight and spacing, rather than using lots of different font styles.

Role	Font	Recommended weight
Hero headline	Space Grotesk	Bold 700
Section heading	Space Grotesk	Semibold 600
Card heading	Space Grotesk	Semibold 600
Body text	Inter	Regular 400

Button text	Inter	Medium 500
Labels and metadata	Inter	Medium 500

Use sentence case for most website headings. Reserve uppercase for small labels and occasional campaign statements.
-Use tight line spacing for large headlines, around 0.95–1.05.
-Use approximately 1.5–1.7 line-height for body paragraphs.
-Keep body copy at 16–18 px on desktop and readable on mobile.
-Avoid ultra-condensed display fonts. Your existing Space Grotesk provides enough character -without copying Dayos's extreme editorial typography.
-Keep letter spacing close to normal. Tighten it slightly for very large headings only when testing shows improvement.

Layout rules to adopt

Element	Starting rule
Base spacing	8 px
Small element gaps	8–16 px
Related content gaps	16–24 px
Card padding	24–32 px
Desktop section gaps	72–96 px
Desktop content width	Maximum 1,200 px

Main content grid	12 columns on desktop
Mobile layout	Single column where appropriate
